Apply filters to SQL queries

Project description

After some recently discovered potential security issues involving login attempts and employee machines I, as a security professional, examined the organization's data in their employees and log_in_attempts tables. I utilized SQL to filter data within the database management system, to query and manipulate data stored in the corresponding tables and retrieve only the pertinent data.

Retrieve after hours failed login attempts

[Add content here.]

Retrieve login attempts on specific dates

[Add content here.]

Retrieve login attempts outside of Mexico

[Add content here.]

Retrieve employees in Marketing

[Add content here.]

Retrieve employees in Finance or Sales

[Add content here.]

Retrieve all employees not in IT
